PINEAROMA

Disinfectant Cleaner

Septone Pinearoma is a quaternary ammonium compound disinfectant cleaner, effective against a wide range of microorganisms including bacteria (both gram-positive and gram-negative), fungi and yeasts. Pinearoma contains only the highest quality pine oils to provide a pleasant residual pine tree masking fragrance which aids in the deodorising of malodours.

Pinearoma is designed to pass the TGA test for a commercial grade disinfectant at a dilution rate of 1 : 120 (i.e. 85 mL or 1/3 cup per 10 L bucket of water). Pinearoma can be used to disinfect and clean floors, bench tops, walls, sinks, baths, shower recesses, toilet bowls, urinals and tiles in schools, shopping centres, nursing homes, transport terminals and any situation which requires the control of bacterial contamination of surfaces and equipment. Pinearoma will even reduce unpleasant odour emissions in sewage treatment plants, waste disposal sites, compactors, waste bins and grease traps (in such cases, Pinearoma is generally diluted at a rate of 1 : 40 with water, and the diluted product is then applied directly onto the site to be deodorised). Pinearoma may also safely be used in the deodorising of septic systems.

Pinearoma will not affect paint, polished surfaces, fabrics, enamel, stainless steel, glass, leather, ceramics, laminates, wood or plastics. Pinearoma's powerful biodegradable nonionic surfactant provides the cleaning power to remove most dirt, grime, fats, oils and grease from washable surfaces when applied by brush, mop, machine or by hand.

DIRECTIONS FOR USE:

For use as a commercial or household grade disinfectant/cleaner, dilute the product in a ratio of 1 part product to 120 parts water (85 mL or 1/3 cup per 10 L bucket of water). Apply the diluted product by cloth, sponge, mop, atomiser spray or machine. Rinse edible product contacting surfaces with potable water after use.

Note: Do not mix the product with soaps or detergents.

APPEARANCE:

Yellow liquid, pine fragrance
